

Q'STRAIT®

INQLINE® SECUREMENT

FEATURES & BENEFITS

TRANSPORTING AND SECURING A MOBILITY PASSENGER
IN A REAR-ENTRY VEHICLE HAS NEVER BEEN EASIER.

CONTROLLED STEERING

INQLINE Securement simplifies the process of guiding a mobility passenger up and down a ramp with an **ergonomic thumb controller** that allows the operator to **manually steer the passenger in and out of the vehicle**.

INDEPENDENT RETRACTORS

INQLINE Securement utilizes two Q'STRAIT self-tensioning auto-locking retractors. A **new patented 360° webbing guide** leads belt webbing over the top of the unit, keeping belts twist-free and allowing for more passenger leg room.

WALL CONTROL PANEL

INQLINE Securement's wall control panel simplifies all functions into an intuitive 2-button wall-mounted unit for easy management of the engaging, releasing and 'squeezing' of the belts as needed.

IMPROVED ANGLES

INQLINE Securement's front and rear tie-downs attach at the ideal angle for **steadier ride conditions and a superior crash test performance**. The lower belt angles also allow for larger wheelchairs to fit in the vehicle and the unit is fully adaptable to **a variety of custom installation configurations**; from floors to walls or even under vehicle seats.

REDUCED LIABILITY

INQLINE Securement gives operators full control of the boarding and securement process, requiring minimal physical strain. Passengers feel safer and operators have true peace-of-mind, leading to better interactions and more positive experiences for everyone.

SPEED, SAFETY & SIMPLICITY

Drivers no longer need to reach around and invade the space of passengers. **INQLINE Securement completely eliminates a time-consuming and uncomfortable step of the securement process**.

A BETTER JOURNEY

INQLINE Securement's 'final squeeze' feature uses electronic sensors to determine exactly how much pressure to apply to the wheelchair, ensuring proper securement at all times.

SPECIFICATIONS

COMPLIANCE

ADA, FMVSS & CMVSS 209/302, and CSA Z605. In addition, all systems are crash tested at 30mph (48kph), 20G, and fully comply with RESNA WC-4, Section 18 and ISO-10542-1

WARRANTY:

2 Years

TOTAL UNIT WEIGHT

27 LBS.
